

Mohamed Ali Aoun

AI & Data Science Student

mohamed-ali.aoun@dauphine.eu | Portfolio | LinkedIn | GitHub | +216 50 234 707

AI & Data Science Master's student with hands-on, end-to-end experience: designing and shipping GenAI systems (LLM, RAG, agents) to production with real software rigor (APIs, Pydantic, asyncio), data analysis and reporting (SQL, Power BI), and coordinating projects across multiple stakeholders. Seeking an end-of-studies internship to contribute to a data & AI team's initiatives, in France or internationally.

EDUCATION

Université Paris Dauphine–PSL Tunis <i>Master's Degree in Artificial Intelligence & Data Science - (Top of class)</i>	2025 – Present
Selected coursework: Generative AI, Natural Language Processing, Deep Learning for Image Analysis, Optimization for Machine Learning, Monte Carlo Search & Games, Knowledge Graphs, Data Analysis, Statistical Learning, Time Series, Data Mining.	
Institut Supérieur d'Informatique El Manar <i>Bachelor's Degree in Computer Science</i>	2021 – 2024

PROFESSIONAL EXPERIENCE

Kin'Yu Consulting AI Engineer – Oracle Cloud	June 2026 – Sept. 2026
- Built LAWAI, an end-to-end document verification and understanding pipeline for Tunisian law firms on Oracle Cloud Infrastructure, automating OCR and structured extraction across 6 legal document types (plus a generic fallback) and turning checks that can take weeks into minutes. - Engineered the extraction layer on OCI Document Understanding and OCI Generative AI, applying a provider/factory pattern with Pydantic schemas and a per-document-type schema architecture; eliminated prompt drift across document types. - Developed OCI Integration flows and agentic workflows to automate processing end to end, and connected them to the client-facing Oracle APEX application, backed by Oracle Database 26ai (documents & extractions tables, status state machine, JSONB payloads, versioning). <i>Oracle Cloud Infrastructure, OCI Document Understanding, OCI Generative AI, Oracle APEX, OCI Integration, Oracle Database 26ai, Python, Pydantic</i>	
VistaDeep AI Engineer (Freelance)	May 2026 – July 2026
Built a supply chain risk intelligence assistant: 3 data agents and an orchestrator, each data agent owning one source (web-scraped disruption events, ~30 commodity indices, the monthly ISM PMI); LLM-based router (direct OpenAI API, JSON-mode selection) with a keyword fallback, agents run concurrently via asyncio and queryable in natural language via Text-to-SQL against PostgreSQL (Supabase, read-only), with executions traced for monitoring. <i>Python, OpenAI API, asyncio, PostgreSQL (Supabase), Text-to-SQL, Multi-Agent</i>	
Opus Lab AI Instructor	Aug. 2026 – Sept. 2026
Designed and delivered a hands-on AI development bootcamp for students aged 15–19 with no coding background, teaching LLM and prompt-engineering fundamentals and guiding each student to build their first chatbot and first AI agent.	
UmanLink Digital Service AI Software Developer	Sept. 2024 – Mar. 2025
- Developed LLM- and RAG-based solutions that automate complex business processes, turning raw data into a driver of operational productivity. Call-Center Analytics Tool: full-stack app (Python back-end, Flask interface) with automated pipelines for cleaning, processing and visualizing data, surfacing call-failure causes and the best times to call customers back; 40+ hours saved per month. <i>(Python, Flask, Pandas, NumPy, Matplotlib, Plotly)</i> E-commerce Chatbot: multi-agent assistant for product search, order tracking and FAQ handling over a vector database and RAG; lifted conversion by 12% and handles ~60% of support queries (shipping, refunds, returns) automatically. <i>(Python, LangChain, GPT-4, Multi-Agent, Text-to-SQL)</i>	
Medianet Data Science Intern	Feb. 2024 – Jul. 2024
Built an AI-powered SEO reporting platform (data analysis, dashboarding and AI-generated summaries) that cut processing time from several days to about 3 minutes (>90% reduction), applying NLP with 97% accuracy. <i>(Python, NLP, GPT-3.5, Web Scraping, BeautifulSoup, Power BI)</i>	
Croki (Startup) Co-Founder	Sept. 2023 – Sept. 2025
Co-founded an EdTech startup in a non-technical role, owning operations, logistics, recruitment, and product delivery; flagship programs (Back to the Future, Orientour) reached 650+ students.	

PERSONAL PROJECTS

FIFA World Cup 2026 - Match & Tournament Prediction Engine	GitHub
Built a probabilistic prediction system on a time-weighted Dixon-Coles model with XGBoost, Monte Carlo tournament simulations, exact knockout probability recursion and a penalty-shootout model trained on 682 real shootouts. <i>Python, XGBoost, Dixon-Coles, Elo, Monte Carlo, pandas, scikit-learn</i>	

TECHNICAL SKILLS

Data & Reporting: SQL, Power BI, MySQL, MongoDB, PostgreSQL, Vector Databases
AI / ML: RAG, LLM Applications, Prompt Engineering, NLP, Multi-Agent Systems, Text-to-SQL, Machine Learning, Statistical Learning, XGBoost, Monte Carlo Simulation
Languages & Frameworks: Python (<i>primary</i>), FastAPI, Pydantic, asyncio, LangChain, R, Java, C, SQL, Git, Streamlit, OpenCV, BeautifulSoup, Supabase
Cloud & Oracle: Oracle Cloud Infrastructure, OCI Document Understanding, OCI Generative AI, Oracle APEX, OCI Integration, Oracle Database 26ai

LANGUAGES
